

General Notice Reformatting Utility

This program allows credit unions to adjust the design of the notices used on the Spectrum system. Can be used to turn a standard notice into a letter format notice, to prepare a notice file for field mode JetForm/Adobe Output Designer laser document printing, or for many other uses.

Features

- Notices of any consistent size can be reformatted.
- Use to add the ^Field information to existing notices in preparation to go to laser notices, using field level control
- Adjust the output to fit properly on the smaller laser printer paper so that no information will show in a standard window envelope
- Makes it easy to go to automated laser notices that utilize an auto sealer
- Reformat back-office checks to include duplicate copies of the receipt portion of the check. This allows back-office laser checks to have the same format as Spectrum checks.
- Merge single notices for the same account into one notice.
